

Radio PSA Transcripts for COVID-19 Vaccine Safety and Effectiveness

60-Second Version

I am _____ from _____.

COVID-19 vaccines are currently available across Indian Country. These vaccines are safe and effective tools for stopping the spread of COVID-19.

COVID-19 vaccines cannot make you sick with COVID-19. Vaccines work by giving our immune systems instructions for how to fight off infections like COVID-19. COVID-19 vaccines do not contain the virus that causes COVID-19.

Short-term side effects are common with COVID-19 vaccines. People may experience soreness at injection site, fever, headache, muscle pain, or tiredness for a few days after getting the vaccine.

Millions of people around the world – including thousands of Native health workers and elders – have been vaccinated safely. Vaccines are a safe way to protect our families and elders from COVID-19. The more people get the vaccine, the more lives we can save in our communities.

Call your healthcare provider or tribal health department to learn more about when you can get your vaccine.
