

**Written responses to questions. Each bullet point is from a different respondent.**

**Q4 What do you know about the disease? If you don't know anything, write "nothing".**

- Extremely contagious
- scary
- Serious virus. Affects all ages differently. Can be fatal.
- It is extremely contagious
- It's a virus human to human transmission
- Very contagious
- Virus effecting the lungs and can lead to effecting other things such as kidneys and brain. It can be transmitted through the air (droplets) and also can stay active on many surfaces for different degrees of time.
- It's contagious and dangerous
- It is extremely contagious
- It could kill people
- What I've heard in media
- It is an airborne virus passed on reportedly from Symptoms include dry cough and fever. It can range from mild to severe and we have had deaths here in Canada because of it. People with high blood pressure or diabetes have a higher chance of getting a more severe case but not always.
- Nothing
- That it makes you have high fever and shortness of breath.
- How badly it effects everyone that gets it
- People can be asymptomatic and still spread the disease. Symptoms include dry cough and fever. More serious for the elderly. Easily spread.
- It's very contagious
- Scary
- Similar to season flus
- Coughing, shortness of breath and high fever
- That it makes breathing hard and that you get fevers from it can be fatal.
- Deadly
- That it spreads fast and needs to be taken seriously.
- That if infects the lungs ,headaches comes n goes. Difficulty in breathing
- It's a virus that's spreading around quickly.
- It is same as cold but more stronger
- It will make you sick, dry cough, high fever
- Very contagious, can be fatal, washing your hands for 20 seconds with soap and water often will help minimize your risk of contracting virus, stay home as much as possible, keep a safe distance of 6 feet from others when you do have to go out.
- I hear it a deadly cold.

- Complications with breathing, lost senses of smell.
- Deadly virus
- The thing spreads pretty damn quick
- Upper Respiratory System Virus that affects the lungs. Disproportionately affects Elders and immunosuppressed/compromised people. Lasts on metal/plastic surfaces for 24hrs and cardboard for 3 days Highly contagious
- I know it is pneumonia like disease, and is contagious. It can be contacted from surfaces and also airborne. It can be fatal to some people, but can also be mild to others. Shows no symptoms for sometime but can still be transmitted without any symptoms.
- It is an infection in the lungs
- Deadly
- Can Spread quickly
- When anyone gets a covid19 they can hardly breathe due to bad cold, and no longer have sense of smell because of the running nose
- It attacks respiratory system along with other vital organs in your body.
- Covid-19 is dangerous disease that can't be treated as of this time, no vaccine yet. Can spread rapidly and quickly.
- It kills people
- It spread fast and can kill
- As the media spreads information about covid -19. I believe The new disease is called the Novel coronavirus. it's stated that it comes from a person and than transmitted from one person to another.
- It's contagious and dangerous
- Deadly

**Q15 Do you have any questions about the virus? If yes, write them here.**

- Most of my questions have already been answered by the doctor that goes in local radio every week
- Why are people with diabetes specifically at higher risk?
- I would want to know if the virus is in our community
- Do they have some testing kits for coved 19 in every health centres Across Nunavut ,that worries me,I haven't heard a lot about testing kits
- Is it cureable?
- Does some of people show no symptoms? Does the test come back before it is too late?
- No,we are already informed.
- Would we have enough ventilators in our small community?
- Does it come back to life after it has been frozen?
- If Covid 19 does spread in Clyde River, what is the response plan and how will we handle the spread with limited health care workers and supplies?
- Is there a plan related to sewage/water truck providers?

- Make mask for the people more (lot don't know how to make mask) for everyone safety. ( give out mask
- I think we now know how to try and prevent it but it's difficult when your not use to all the requirements, especially when alway busy
- Can Government of Nunavut prevent Canadians coming to the north who are not from the north?
- Once you get corona virus, and you're healed from all that if you survived it through, do you get sick again and, again do you get disease from corona virus?

#### **Q16 Anything else you want to add?**

- Essential workers arriving should be tested for covid before arriving because they don't have to self isolate. This is the weakest link to allow the virus into the community. The store should have lines on the floor at the check outs fir proper distancing. All residents should receive some hand sanitizer. We got most of our knowledge of covid from watching tv mostly news Channels. TV wasn't an option in the previous questions to check off fir learning about covid.
- I don't think the hamlet is doing enough to guide or help the community. There is very little leadership from our mayor in this issue.
- Keep up the good work on everybody's part, thank you
- Stay home ,wash hands ,now that some people have some time in there homes ,start disinfecting your home,IE anything people touch normally in your home ,start with doorknobs
- Stay home be safe
- Contagious disease
- Find ways to heal fiscally and mentally. Maybe have a coordinator,
- Keep up the good work on keeping us informed about the situation.
- I wish more to stay home inside!
- Unless people are not from the north, don't allow them to visit Nunavut until the pandemic is over.
- Many people in many house scares me. I was wondering if govt can help us with the housing until it's over.
- Stay safe
